

### 3.Listing Item Component

Ye compt me ham as prop **listings** or **id** pass krengy !

```
Category.jsx ListingItem.jsx U
src > components > ListingItem.jsx > ListingItem
1 import {Link} from 'react-router-dom'
2 import {ReactComponent as DeleteIcon} from '../assets/svg/deleteIcon.svg'
3 import bedIcon from '../assets/svg/bedIcon.svg'
4 import bathtubIcon from '../assets/svg/bathtubIcon.svg'
5
6 function ListingItem({ listing, id }) {
7   return (
8     <li className='categoryListing'>
9       <Link to={` /category/${listing.type}/${id}`}
10        className='categoryListingLink'>
11         <img src={listing.imgUrls[0]} alt={listing.name}
12          className='categoryListingImg' />
13       </Link>
14     </li>
15   )
16 }
```

Put in category compt :

```
<main>
  <ul className='categoryListings'>
    {listings.map((listing) => (
      <ListingItem
        listing={listing.data}
        id={listing.id}
        key={listing.id}
      />
    ))}
  </ul>
</main>
```

So continue in item compt:

```
<img
  src={listing.imgUrls[0]}
  alt={listing.name}
  className='categoryListingImg'
/>
<div className='categoryListingDetails'>
  <p className='categoryListingLocation'>{listing.
location}</p>
  <p className='categoryListingName'>{listing.name}</p>
</div>
```

Price is depending on wheter its on offer or not ?

```
<p className='categoryListingName'>{listing.name}</p>
<p className='categoryListingPrice'>
  $
  {listing.offer
    ? listing.discountedPrice
      .toString()
      .replace(/\B(?=(\d{3})+(?!\d))/g, ',')
    : listing.regularPrice
      .toString()
      .replace(/\B(?=(\d{3})+(?!\d))/g, ',')}
</p>
```

Agar house rent pe ha to per month dikhao

```
      : listing.regularPrice
        .toString()
        .replace(/\B(?=(\d{3})+(?!\d))/g, ',')}
{listing.type === 'rent' && ' / Month'}
p>
```

Now we will show details:

```

</p>
<div className='categoryListingInfoDiv'>
  <img src={bedIcon} alt='bed' />
  <p className='categoryListingInfoText'>
    {listing.bedrooms > 1
      ? `${listing.bedrooms} Bedrooms`
      : '1 Bedroom'}
  </p>
</div>

```

```

<div className='categoryListingInfoDiv'>
  <img src={bedIcon} alt='bed' />
  <p className='categoryListingInfoText'>
    {listing.bedrooms > 1
      ? `${listing.bedrooms} Bedrooms`
      : '1 Bedroom'}
  </p>
  <img src={bathtubIcon} alt='bath' />
  <p className='categoryListingInfoText'>
    {listing.bathrooms > 1
      ? `${listing.bathrooms} Bathrooms`
      : '1 Bathroom'}
  </p>
</div>

```

Now , ab ye card jo ha jo k show krne hen wo ek user ki profile pe bhi show honay hen jo k user ne apny account se create kiye hongy ab usko delete ka option dena ha so we pass in another prop **onDelete** in this item compt:

Abbhi deleteIcon show nahi hoga q k onDelete pass on nahi kia item compt me !

```

{onDelete && (
  <DeleteIcon
    className='removeIcon'
    fill='■ rgb(231, 76,60)'
    onClick={() => onDelete(listing.id, listing.name)}
  />

```
