

1.Explore Page

We will have some images that are clickable and will take us to rent or sale listings.

```
Explore.jsx M × index.css
src > pages > Explore.jsx > [E] Explore
1  import { Link } from "react-router-dom"
2  import rentImage from '../assets/jpg/rentCategoryImage.jpg'
3  import sellImage from '../assets/jpg/sellCategoryImage.jpg'
4
5  const Explore = () => {
6    return (
7      <div className="Explore">
8        <header>
9          <p className="pageHeader">Explore</p>
10       </header>
11       <main>
12         { /* slider */ }
13         <p className="exploreCategoryHeading">Categories</p>
14         <div className="exploreCategories">
15           <Link to="/category/rent">
16             <img src={rentImage} alt="rent" className="exploreCategoryImg"/>
17             <p className="exploreCategoryName">Places for rent</p>
18           </Link>
19           <Link to="/category/sale">
20             <img src={sellImage} alt="sell" className="exploreCategoryImg"/>
21             <p className="exploreCategoryName">Places for Sale</p>
22           </Link>
23         </div>
24       </main>
25     </div>
  
```

Now we will create category page , and bring in app.js:

```
Explore.jsx M Category.jsx U App.js M ×
src > App.js > App
11  import Navbar from './components/Navbar';
12  import PrivateRoute from './components/PrivateRoute';
13  import Category from './pages/Category';
14
15  function App() {
16    return (
17      <>
18        <Router>
19          <Routes>
20            <Route path="/" element={<Explore />} />
21            <Route path="/offers" element={<Offers />} />
22            <Route path="/category/:categoryName" element={<Category />} />
  
```
