CSS property display: contents; ek unique aur relatively kam-use ki jane wali property hai jo ek element ke box ko DOM (Document Object Model) me se visually hatati hai, magar uske child elements ko unki jagah par intact rakhti hai.

Key Behaviors of display: contents;

1. **Parent Element Disappears:**

   - Parent element ka box model (e.g., margin, padding, border) render nahi hota.

   - Parent element visually DOM tree se "disappear" ho jata hai.

2. **Child Elements Remain Intact:**

   - Parent ke andar jo child elements hain, wo DOM me apni jagah par rendered rahte hain.

   - Child elements parent ke box ki dependency ke bina behave karte hain.

3. **No Visual Wrapping:**

   - Parent ka koi visual effect nahi hota, magar structural DOM me wo ab bhi maujood hota hai (e.g., for accessibility).
